

# Calcitnow

## Integration

1. Create a Marketo API role with read and write access, according to Marketo’s guidelines. Add an API-Only user with the role you just created. Then set up a new custom Launchpoint service with the user you just created. When done, click on the details and copy the host, client\_id, and client\_secret.
2. Login to Calcitnow. Go to the settings tab.

3. Enter the credentials from step #1.

4. Fields and partitions will automatically be synced when successfully connected. Lists can be synced manually and can take a while, depending on the amount of lists you have. Please note fields are automatically synced every 24 hours.
