

stensul + Marketo

There are several ways emails created with stensul get passed to Marketo. One of the most commonly used ways is to pass the finished email code and campaign details via API. The high-level steps below outline how this will work with your account.

- During your stensul implementation, our team will work with you to securely link your Marketo account to your stensul account.

- Once you are creating emails with stensul, for each finished email, you will see an 'Upload to Marketo' icon next to each finished email.

- Once clicked, the user will be prompted to confirm the file name before the finished code is passed to Marketo.

A screenshot of a dialog box titled "Upload to Marketo" with a close button (X) in the top right corner. Below the title is a green success message: "Email successfully uploaded to Marketo. View dashboard." Below that is a label "Filename (extension will be added automatically by stensul)" and a text input field containing the word "test".

- Your email code and any customized campaign details are then passed to your account within Marketo and the email is ready to be setup for deployment.

If the email changes, the user can easily pass the updated code to overwrite the original, or choose to pass the newer version with a different filename.
